The California Foundation for Agriculture in the Classroom is dedicated to fostering a greater public knowledge of the agricultural industry. The Foundation works with K-12 teachers, community leaders, media representatives, and government executives to enhance education using agricultural examples, helping young people acquire the knowledge needed to make informed choices.

This unit was originally developed in 1996 through a partnership between the Fresh Produce and Floral Council, the California Farm Bureau Federation, and the California Foundation for Agriculture in the Classroom. *Fruits and Vegetables for Health* was updated in 2012 in partnership with the California Department of Public Health's *Network for a Healthy California* with funding from USDA SNAP, known in California as CalFresh (formerly Food Stamps). These institutions are equal opportunity providers and employers. CalFresh provides assistance to low-income households and can help buy nutritious foods for better health. For CalFresh information, call (877) 847-3663. For important nutrition information, visit [www.cachampionsforchange.net](http://www.cachampionsforchange.net).

Funding for 2017 updates were provided through a California Agriculture Special Interest License Plate grant (CalAgPlate) that supports agricultural education, agricultural career training, and agricultural leadership development. For more information, visit [www.CalAgPlate.com](http://www.CalAgPlate.com).

The Foundation would like to thank the people who helped create, write, revise, test, and edit this unit. Their comments and recommendations contributed significantly to the development of *Fruits and Vegetables for Health*. Their participation does not necessarily imply endorsement of all statements in the document.

The framework for California public schools emphasizes the need to make education meaningful to students so they can apply what they learn in the classroom to their daily lives. Since all students eat food and wear clothing, one natural connection between academic education and the real world is agriculture.

Agriculture is an important industry in the United States, especially in California. As more rural areas become urbanized and more challenges exist to maintain and improve the quality of the planet and feed the people of the world, it is extremely important to educate students about their environment, agriculture, and the modern technologies that continue to make Earth a viable and productive planet.

*Fruits and Vegetables for Health*, a fourth through sixth grade unit, introduces students to the production, distribution, and nutritional value of California fresh produce. Students will study California geography, plan healthy meals, and write formal letters to agriculture commodity boards. They will also practice evaluating data tables and graphing as they study the nutritional value of fruits and vegetables. A simple chemistry experiment involving observation, prediction, data gathering, and summarizing is also included in the unit. As a culminating activity, students write a creative story that details the path a particular fruit or vegetable takes to get from the farm to the table. The need for all people to eat fresh produce is emphasized throughout the unit.

This unit teaches subject matter reinforced by the current California standards for California Public Schools. The standards, located on the sidebar of each lesson, specify grade level, subject matter and standard number. A standards matrix for the entire unit, with specific standards described, is located on pages 69-82. *Fruits and Vegetables for Health* is one of many educational units developed and distributed by the California Foundation for Agriculture in the Classroom.
Unit Overview

**Unit Length**

Approximately fifteen 50-minute sessions.

**Objectives**

*Students will:*

- Examine USDA's MyPlate icon.
- Identify and compare key nutrients in selected fruits and vegetables.
- Learn the benefits of eating fruits and vegetables.
- Examine the varying geographical features and climates of California.
- Write business and thank-you letters.
- Comprehend the importance of California agriculture.
- Create a report and oral presentation on a fruit or vegetable.
- Create bar graphs.
- Experiment with various food preservation techniques.
- Write a narrative story about a fruit or vegetable.

**Brief Description**

This unit contains five lessons designed to teach students about the production, distribution, and nutritional value of California-grown produce. Students will gain knowledge in geography, language arts, science, and math as they learn about the process through which fruits and vegetables are transported from California farms to kitchen tables.

The lessons can be used separately or together and may be taught in any order. To fully address the concepts, however, teaching the unit in the provided sequence and in its entirety is recommended.

**California Standards**

A concerted effort to improve student achievement in all areas has impacted education throughout California. The California Foundation for Agriculture in the Classroom provides educators with numerous resource materials and lessons that can be used to teach and reinforce the current education standards for California Public Schools including Common Core State Standards. The lessons encourage students to think for themselves, ask questions, and learn problem-solving skills while learning the specific content needed to better understand the world in which they live.

This unit, *Fruits and Vegetables for Health*, includes lessons that can be used to teach and reinforce many of the educational standards covered in grades four through six. It can be used as a self-contained unit, to enhance themes and lessons already in use, or can provide technical information about nutrition and agriculture. Emphasis is also placed on the importance of eating fresh produce.

The specific educational standards met are listed on the sidebars of each lesson. A matrix chart showing how the entire unit is aligned with current standards including Common Core State Standards and Next Generation Science Standards is included on pages 69-82.
Evaluation

This unit incorporates numerous activities and questions that can be used as evaluation tools, many of which can be included in student portfolios. Embedded assessment includes oral and written responses to open-ended questions, drawing, group presentations, and other knowledge-application projects.

In addition, Network for a Healthy California created the Nutrition Education Survey (NES) to assess the impact of nutrition education delivered to fourth through eighth grade students. The NES is a modular tool that educators can customize to measure outcomes related to nutrition education. Use of this tool may help teachers justify the importance of integrating units like Fruits and Vegetables for Health into regular classroom instruction. Visit www.harvestofthemonth.cdph.ca.gov/Pages/impact-eval.asp to download the evaluation tool.

Visual Display Ideas

- Draw a large MyPlate icon on butcher paper. Have students fill each section with related pictures from magazines or grocery store ads.
- Make a large outline of California on butcher paper. Have students draw pictures of different fruits and vegetables and place them on the map in regions where they are grown.
- Pictorially, trace the path that one particular commodity takes to get from the farm to the table.
- Display bar graphs and stories students create in the lessons.
- Have each student draw a picture of the fruit or vegetable they learned about. Post these on a bulletin board with interesting facts about each commodity.

Before You Begin

1. Skim over the entire unit. Make appropriate changes to the lessons and student worksheets to meet the unique student needs and personal teaching style.

2. The following resources may be helpful in learning about various commodities:
Unit Overview

- California Department of Food and Agriculture’s website, www.cdfa.ca.gov. This site contains general and specific information on various aspects of agriculture.

- Network for a Healthy California’s Harvest of the Month program features tools and resources that help teachers give students hands-on learning opportunities as they explore, taste, and learn about the importance of eating fresh fruits and vegetables. All program materials can be downloaded for free from www.harvestofthemonth.com.

- USDA’s website, ChooseMyPlate.gov. This site features great educational materials that are up-to-date with the 2015 Dietary Guidelines.

- California Farm Bureau Federation’s website, www.cfbf.com. This site has articles on current issues in agriculture as well as agricultural information on each county.

- The agricultural organizations listed on pages 49-53.

3. Read “Answers to Commonly Asked Questions” on pages 44-48 to gain background knowledge to use during the unit. Also review the glossary on pages 83-85. Use these definitions with your students as you see appropriate.

4. Ideally, nutrition education is incorporated into all curricular areas and is promoted by example through school-provided breakfasts and lunches. If possible, work with school nutrition and cafeteria personnel to use the school cafeteria as a learning laboratory for classroom lessons.

5. Arrange classroom visits from people involved in the food industry. Guest speakers may include farmers, ranchers, food distributors, grocers, dietitians, and chefs.

6. Organize appropriate field trips. Possibilities include local farmers markets, food distribution centers, wholesale fresh produce markets, farms, ranches, and grocery stores.

7. Obtain the necessary supplies for the unit.

Thank you for recognizing the importance of helping students understand and appreciate agriculture. We hope you find this resource useful in your teaching endeavors.
Making Half MyPlate Fruits and Vegetables

Purpose
The purpose of this lesson is to introduce students to the 2015-2020 Dietary Guidelines for Americans and to reinforce the importance of making half your plate fruits and vegetables.

Time
Teacher Preparation: 10 minutes
Student Activities: One 50-minute session

Materials
For the class:
- 1-cup measuring cup
- Two dominoes

For the student:
- MyPlate handout (page 13)
- MyPlate Daily Food Plan Checklist (pages 14)
- Fruits and Veggies on MyPlate (page 15)
- Have Fun With Fruits and Vegetables (page 16)

Background Information
The 2015-2020 Dietary Guidelines for Americans promotes the importance of a healthy eating pattern to maintain health and reduce the risk of disease. Everything you eat and drink — the food and beverage choices we make day to day and over our lifetime — matters. By eating a variety of foods from each food group, we give our bodies what they need to be and stay healthy. Start with small changes to make healthier choices you can enjoy.

The MyPlate logo serves as a colorful visual that a person should eat foods from the five food groups each day. It is important to eat a variety of healthy foods. Find your healthy eating style and maintain it for a lifetime. Try to:

- Make half your plate fruits and vegetables.
  - Focus on whole fruits
  - Vary your veggies.
- Make half your grains whole grains.
- Move to low-fat and fat-free milk or yogurt.
- Vary your protein choices.
- Drink and eat less sodium, saturated fat, and added sugars.
- Children 6-17 years old should move at least 60 minutes each day.

This lesson will focus on encouraging students to choose foods based on the 2015-2020 Dietary Guidelines for Americans and MyPlate recommendations, with special attention to the goal: Make half your plate fruits and vegetables.

Procedure
1. Distribute the MyPlate handout to each student. Briefly review the five food groups. The fruits and vegetables sections take up half the plate, with the vegetable food group being slightly larger than the
fruit group. The grains section is larger than the protein section. Each food group’s size is slightly different because our bodies need different amounts from each food group to stay healthy.

2. Have students write a one-minute “quick list” of foods that could be listed in each of the five groups. Note: Beans are unique because they fit in both the protein and vegetables group. For more information about beans and peas visit: choosemyplate.gov/vegetables-beans-and-peas.

3. Have students share their answers and record them in a chart on the board. Create a spelling list from select words.

4. Lead students through a discussion of five reasons why they should make half their plate fruits and vegetables daily. Discussion points may include:

- Fruits and vegetables are the only source of vitamin C in the diet. Vitamin C helps the body heal wounds and lowers the risk of infection. It also helps keep the body from bruising and builds the tissue that holds muscles and bones together. Vitamin C is also known as ascorbic acid and helps the body absorb the iron found in foods and strengthens the immune system.

- Vitamin A serves several functions in the body. It helps maintain good vision, fight infection, support cell growth, and keep skin healthy. Leafy greens, carrots, sweet potatoes, squash, spinach, apricots, and green peppers are all excellent sources of vitamin A.

- Fruits and vegetables are a good source of complex carbohydrates, whose energy release is slow, gradual, and long lasting. Sugar provides quick energy, but its effects are short lived. This knowledge is important when choosing foods to eat before an athletic event.

- Fruits and vegetables contain fiber. Fiber helps move food through the body to prevent constipation and provide a sense of fullness.

- Fruits and vegetables are quick, often ready to eat, easy to carry,
and tasty foods to have as snacks. They provide the energy needed to function throughout the day.

- Eating a variety of fruits and vegetables provides health benefits — people who eat more fruits and vegetables as part of a healthy eating style are likely to have a reduced risk of some chronic diseases.
- Fruits and vegetables provide nutrients that help us grow and stay healthy.
- They are naturally low in fat and calories. None have cholesterol.

5. Briefly discuss what foods are in the fruit and vegetable groups using the MyPlate Daily Food Plan Checklist on page 14.

Fruit Group:

- Any fruit or 100% fruit juice counts as part of the Fruit Group. Fruits may be fresh, canned, frozen, or dried, and may be whole, cut-up, or pureed. For more information and fruit group photos visit choosemyplate.gov/myplate/fruits/gallery.
- Focus on whole fruits
- Choose whole or cut up fruits more often than 100% juice.
- Snack on fresh, frozen, canned, or dried fruits instead of cookies, brownies, or other sugar-sweetened treats.

Vegetable Group:

- Any vegetable or 100% vegetable juice counts as a member of the Vegetable Group. Vegetables may be raw or cooked; fresh, frozen, canned, or dried/dehydrated; and may be whole, cut-up, or mashed. For more information and vegetable group photos visit choosemyplate.gov/myplate/vegetables/gallery.
- Vegetables are organized into 5 subgroups based on their nutrient content:
  - Dark-Green Vegetables (e.g., broccoli, spinach, romaine lettuce, bok choy, collard greens)
  - Red and Orange Vegetables (e.g., acorn or butternut squash, carrots, pumpkin, red peppers, sweet potatoes, tomatoes)
Beans and Peas Vegetables (e.g., chickpeas/garbanzo beans; lentils; black, kidney, navy, or pinto beans)

Starchy Vegetables (e.g., corn, green peas, green lima beans, plantains, potatoes)

Other Vegetables (e.g., celery, cucumbers, green beans, green peppers, iceberg lettuce, zucchini)

6. Discuss the importance of eating a variety of vegetables from each of the subgroups throughout the week. Vegetable subgroup recommendations are given as amounts to eat WEEKLY. It is not necessary to eat vegetables from each subgroup daily. Most people need to eat more vegetables from the Dark-Green, Red and Orange, and Beans and Peas subgroups.

7. Ask students to name their favorite vegetables in each of the subgroups. Write the subgroup categories on the board.

8. Review the amount of food students need from each of the five food groups each day using the MyPlate Daily Food Plan Checklist on page 14. Direct the students to identify what foods are measured in cups vs. ounces. (The amounts of foods are listed in cups for fruits, vegetables, and dairy, and in ounce equivalents for grains and protein foods.) To help students see what these foods might look like on a plate, use measuring cups for volume and two dominoes for one-ounce equivalents.

9. Show students what a ½ cup of fruits, vegetables, and cooked grains look like. Display the food on a plate. Have the students measure 1 or 2 cups of food to compare. Have the students hold 2 dominoes in their hand. Explain that the 2 dominoes are equal to one ounce.

10. Have students complete the Fruits and Veggies on MyPlate handout on page 15 or at fns.usda.gov/sites/default/files/digin_l1h2.pdf.

11. Have students try the Have Fun with Fruits and Vegetables Word Search on page 16 or at choosemyplate-prod.azureedge.net/sites/default/files/audiences/HaveFunWordSearch.pdf.

Extension

- Visit supertracker.usda.gov to create an individual profile and calculate the number of servings for MyPlate Daily Checklist.
MyPlate is a colorful visual of the five food groups that are the building blocks for a healthy eating style throughout your lifetime. Each of these food groups provide some, but not all, of the nutrients you need. No one food group is more important than another—for good health you need them all. Everything you eat and drink matters.

Information compiled from the United States Department of Agriculture (USDA). Go to ChooseMyPlate.gov for more information.
Children have different calorie needs based on their height, weight, and physical activity level. For example, the food group amounts for 1,800 calories a day for children ages 9 and up that are active for 30 minutes or more per day are:

**Fruits- 1 ½ cups**
1 cup of fruits:
- 1 cup raw or cooked fruit
- ½ cup dried fruit
- 1 cup 100% fruit juice

**Vegetables- 2 ½ cups**
1 cup of vegetables:
- 1 cup raw or cooked vegetables
- 2 cups leafy salad greens
- 1 cup 100% vegetable juice

**Grains -6 ounce equivalents**
1 ounce of grains:
- 1 slice bread
- 1 cup of ready-to eat cereal
- ½ cup of cooked rice, pasta, or cereal

**Protein-5 ounce equivalents**
1 ounce of protein:
- 1 ounce lean meat, poultry, or seafood
- 1 egg
- 1 Tbsp peanut butter
- ¼ cup cooked beans or peas
- ½ ounce nuts or seeds

**Dairy-3 cups**
1 cup of dairy:
- 1 cup milk
- 1 cup yogurt
- 1 cup fortified soy beverage
- 1 ½ ounces natural cheese or 2 ounces processed cheese.

Each of these food groups provide some, but not all, of the nutrients you need. No one food group is more important than another—for good health you need them all. Drink and eat less sodium, saturated fat, and added sugars for a healthy eating style.
Fruits and Veggies on MyPlate

Edible plant parts are found in more than two of the five MyPlate food groups we need each day for good health. Do you know which ones? (Circle them below).

<table>
<thead>
<tr>
<th>Fruit Group</th>
<th>Vegetable Group</th>
<th>Grain Group</th>
<th>Protein Foods Group</th>
<th>Dairy Group</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Look at the school lunch menu below and fill in the table by answering the following questions:

1) What is the original ingredient?
   - For each menu item, list the major ingredient from which it was made. Pizza is a combination food made up of foods from three food groups. Provide answers for each food in the pizza, as well as for the rest of the meal.

2) What food group does it belong to?

3) Did it come from a plant? Answer “yes” or “no.”

4) Which edible plant part is it?

5) What fruits and vegetables are on this menu? List them:

<table>
<thead>

5) What fruits and vegetables are on this menu? List them:

_____________________________________________________________________________
Have Fun With Fruits and Vegetables

Find the hidden fruits and vegetables in the puzzle. Words can read up, down or across, from left to right or right to left.

**Find:**

- Apple
- Banana
- Broccoli
- Carrots
- Celery
- Eggplant
- Grapes
- Kiwi
- Orange
- Papaya
- Pear
- Peas
- Squash
- Yams

**Fruit and Vegetable Goals**

Name a fruit you would like to try:

________________________________________________________________________

________________________________________________________________________

How will you eat this fruit? (On cereal, as a snack, for dessert, with dinner or on pancakes.)

________________________________________________________________________

________________________________________________________________________

Name a vegetable you would like to try:

________________________________________________________________________

________________________________________________________________________

How will you eat this vegetable? (As a snack, with dip, or for lunch.)

________________________________________________________________________

________________________________________________________________________
Purpose

The purpose of this lesson is for students to appreciate that California is a major agricultural state. They will gather information on the production of one specific California agricultural commodity.

Time

Teacher Preparation:
20 minutes

Student Activities:
Part I
Two 50-minute sessions

Part II
Three 50-minute sessions

Note: Part II cannot be completed until all materials have been gathered from the letter writing activity. This may take at least four weeks.

Materials

For the class:
- Large wall map of California with legend
- Reference books on fruits and vegetables (optional)
  For each partnership:
- Agricultural Distribution Process handout (page 24)

Background Information

Agriculture is an enormous industry in California and has tremendous economic impact on our state. Agriculture commodity boards, councils, and commissions serve the growers and public in many ways. These groups provide facts and figures to the government, educate farmers and consumers about the commodity, and can provide a wealth of information to educators and students. Be aware that addresses for these organizations change and can be confirmed using the websites. Refer to pages 49-53 for more information.

Procedure

Part I

1. Introduce the lesson. Explain to your students that they will be learning about California agriculture. They will become “experts” on one California commodity, write a report, and make an oral presentation to the class. Review the agricultural distribution process using the chart on page 23.

2. Show students a large wall map of California. Introduce the legend and brainstorm several things that can be learned from the map. Have students locate where they live and identify the nearest agricultural growing regions. Discuss the main topographical areas of California—the mountains, valleys, deserts, and coastal areas. Discuss what your students know about the climate, water, and soil of different regions and how this information can indicate an area’s agricultural capacity. Discuss that each commodity grown in California has unique needs and grows best in certain regions of California. Use the map template (page 23) as you see appropriate for your students. A useful commodity map can be viewed and downloaded from LearnAboutAg.org/resources/learn/map.pdf.
Materials (continued)

- Map of California handout (page 23)
- California's Major Agricultural Commodities list (page 21)
- Agricultural Organizations list (pages 49-53)
- Postage stamps and/or access to e-mail
- Letter writing materials
- Sample Letter to Agricultural Commodity Board handout (page 22)

3. Select an agricultural commodity to research. Present students with the list of California’s major agricultural commodities and the addresses of agricultural organizations (pages 49-53). In small groups of two or three, have students select an agricultural commodity for which they will become “experts.” Explain that they will teach their classmates about their commodities.

4. Write a business letter. Have students select one fruit or vegetable and write a formal business letter to an appropriate agricultural commodity board and/or farmer. Prior to writing the letter, students should prepare a list of things they wish to learn. Students may choose to write to more than one organization. A sample letter is provided on page 22.

Included in their requests may be questions related to:

- The production of the crop.
- The agricultural distribution of the crop (*how the crop gets from the farm to the table)*.
- Growing locations and conditions.
- Uses of the crop.
- The nutritional value of the crop.
- The importance of the commodity to California’s economy.

Students may also ask for:

- Informational brochures.
- Samples and/or pictures of the crop or product.

5. Approve the letters before the envelopes are sealed. Mail the letters and wait for a reply. Many organizations have e-mail. Some students may wish to e-mail their letter once it is proofread.
Part II

1. Write a thank-you letter. Upon receipt of materials, have the students write and send thank-you letters to the organizations that provided information. Be sure to have students proof the rough drafts of their letters and have you review them, prior to sending. Remind students to write legibly and use proper letter format.

2. Write a report on a California agricultural commodity. The information and materials received from the agricultural commodity board should be assembled into a written report and used in an oral presentation. The written report should be proofed for grammar, spelling, and organization before making a final copy which is typed or written legibly and includes quotes or paraphrasing of information from various sources. Credit should be given to all references. The written report may include:
   - A map of California with growing areas highlighted.
   - A creative schematic drawing of how the commodity gets from the farm, where it is grown, to the table, where it is eaten.
   - Interesting facts and products.
   - Nutritional information.
   - Information about the importance of the crop to California’s economy.
   - Brochures, pictures, or other supporting materials.

3. Make an oral presentation. Have each group of students give a three-to-five-minute “expert” oral presentation explaining what they have learned about agriculture in California and the specific commodity that they have researched. Encourage creative presentations which may include television commercials, plays, editorials, news reports, poems, or interviews. Prior to the formal presentation, students should practice their reports orally focusing on volume, pitch, and appropriate body gestures.

California Standards

Grade 4

Common Core English Language Arts
- RI.4.1, 4.3, 4.4, 4.9
- RF.4.4
- W.4.2, 4.4, 4.7, 4.9
- SL.4.4, 4.5
- L.4.1, 4.2, 4.3

Grade 5

Common Core English Language Arts
- RI.5.1, 5.4, 5.7, 5.9
- RF.5.4
- W.5.2, 5.4, 5.7, 5.9
- SL.5.4, 5.5
- L.5.1, 5.2, 5.3

Grade 6

Common Core English Language Arts
- RI.6.1, 6.2, 6.4, 6.7
- W.6.2, 6.4, 6.7
- SL.6.4, 6.5
- L.6.1, 6.2, 6.3
Extensions

- Have students choose one of the crops studied and include it in one of their meals at home. Students then summarize their experience and send their summary to the organization that provided information.

- Take a field trip to a farmers market, the produce section of a local supermarket, or a local produce vendor. Observe how California crops are marketed.

- Learn about careers involved in each step of Farm to Table. Have students research opportunities in production agriculture, food processing, marketing, retail, and transportation of commodities. Add careers to the Distribution Process handout (page 24.)
In 2015, the leading California commodities were:

1. Milk and Cream ...................................................... $6,290,000,000
2. Almonds ................................................................ $5,330,000,000
3. Grapes ................................................................ $4,950,000,000
4. Cattle and Calves ................................................... $3,400,000,000
5. Lettuce ................................................................. $2,260,000,000
6. Strawberries .......................................................... $1,860,000,000
7. Tomatoes ............................................................... $1,710,000,000
8. Flowers and Foliage ............................................... $1,080,000,000
9. Walnuts ................................................................. $977,000,000
10. Hay ...................................................................... $945,000,000

Sample Letter to Agricultural Commodity Board

Student's Name
School Name
School Address
School Phone Number

Date

Mr. Robert Apple
Fresh Valley Fruits
3001 Produce Circle
Pleasant Grove, CA 90132

Dear Mr. Apple:

Introductory paragraph. The first paragraph of your letter should be short. Introduce yourself to the person to whom you are writing. Explain why you are writing the letter.

Body paragraph(s). The following paragraph(s) should provide more details about why you are writing. If you are asking for information, provide a detailed list of what you would like to know. Use linking structures to improve the flow of your writing. "Moreover," "furthermore," and "in addition," are all examples of words that can be used to link sentences together. If you would like to request brochures, samples, or additional resources, ask for them directly.

Concluding paragraph. The last paragraph should state what action you would like the reader to take. Specify when you would like them to respond by, and tell the reader what you plan to do with the information. Be sure to thank them for their time and assistance.

Sincerely,

_______________________________
Student’s Name

Note: This is a sample letter. All students should write their own letters using their own words.
Agricultural Distribution Process

1. Farm or Ranch
2. Packing and/or Processing Plant
3. Distribution Center and/or Wholesale Market
4. Grocery Store
5. Restaurant
6. Farmers Market or Produce Stand
7. Consumer
Purpose

In this lesson students will learn that fresh produce is a good source of vitamin A, vitamin C, and fiber, and that all fruits and vegetables do not contain the same quantities of each nutrient.

Time

Teacher Preparation: 10 minutes

Student Activities: One or two 50-minute sessions

Materials

For each student:

- Fresh Fruits and Vegetables Nutrition Facts handout (pages 27-29)
- Dietary Fiber, Vitamin A and Vitamin C bar graph worksheets (pages 30-32)
- Colored pencils, crayons, or markers
- Nutrient Comparison worksheet (pages 33-34)

For the teacher:

- Document Camera
- Markers

Background Information

The Percent Daily Value on the Nutrition Facts label is a guide to the nutrients in one serving of food. For example, if the label lists 5 Percent Daily Value for fiber, it means that one serving provides 5 percent of the fiber you need each day.

The Daily Values are average levels of nutrients for a person eating 2,000-calories a day. For children, the amount needed will be slightly lower. Even if a person’s diet is higher or lower in calories, they can still use the Percent Daily Value as a guide. Percent daily values are the entire day, not just one snack or meal. For example, the Percent Daily Value can help students determine whether a food is high or low in specific nutrients:

If a food has 5 percent or less of a nutrient, it’s considered to be low in that nutrient. If it has 20 percent or more, it’s considered to be high in that nutrient.

To get the most benefit from Percent Daily Values, use them to choose foods high in vitamins, minerals and fiber—and to limit foods high in fat, cholesterol, and sodium. This lesson is designed to help students visualize which fruits and vegetables are the richest sources of vitamin A, vitamin C, and fiber.

Vitamin A is essential for maintaining good vision, fighting infection, supporting cell growth, and keeping skin healthy. Research has shown that consuming one serving a day of a food containing vitamin A may help prevent some kinds of cancer.

Vitamin C (ascorbic acid) is a powerful antioxidant. These nutrients help protect cells from damage that can increase the risk for certain diseases, such as cancer. Vitamin C helps the body heal cuts and wounds and helps lower the risk of infection.

Dietary fiber naturally occurs in plants, helps provide a feeling of fullness, helps keep your blood sugar level normal, and helps to avoid constipation. Sources of dietary fiber include dry beans and legumes, vegetables, fruits, whole grains, and nuts.
# Nutritional Value of Fresh Produce

## Procedure

1. Distribute copies of the *Fresh Fruits and Vegetables Nutrition Facts* handout to individual students or small groups of two or three. Review one Nutrition Facts label with the class to make certain that students understand how to read them. Using a document camera to show the handout may be helpful.

2. Distribute copies of the bar graph worksheets. Review the procedure for making bar graphs. You may wish to make an example blank graph to use in your explanation of bar graphing. Remind students that all graphs contain the following:
   - labels for the axes
   - a title
   - evenly divided horizontal and vertical axes
   - accurate data

3. Have students complete the bar graphs.

4. Distribute and discuss the *Nutrient Comparison* worksheet. Instruct students to use their bar graphs to complete the worksheet. Discuss the answers.

## Variations

- Have students create their own bar graphs on graph paper. Instruct them to label the x- and y-axes, determine appropriate increments, and give their graph a title.

- Have students create large nutrition pictographs or bar graphs for posting or displaying in the school cafeteria or library.

## Extension

- Have a tasting party of the fruits and vegetables you have studied. Ask the students to make a survey of the most popular fruits and vegetables among the class members and prepare graphs that display the results of the survey.

### California Standards

**Grade 4**

- **Common Core English Language Arts**
  - RI.4.1, 4.3, 4.7

- **Common Core Mathematics**
  - 4.MD.4

**Grade 5**

- **Common Core English Language Arts**
  - RI.5.3, 5.7

Dietary fiber is found in fresh fruits and vegetables and in grains such as wheat and oats. Fiber helps you feel full, helps keep your blood sugar level normal, and helps to avoid constipation. The 2015 Dietary Guidelines for Americans recommends that young people between the ages of 9 and 18 consume 22-31 grams of fiber each day, depending on age, gender, and physical activity. Use the information from the Fresh Fruits and Vegetables Nutrition Facts handout to create a bar graph on fiber quantities in fresh fruits and vegetables.

Name: _______________________
Vitamin A helps maintain good vision, fight infections, and keep your skin healthy. Use the information from the *Fresh Fruits and Vegetables Nutrition Facts* handout to create a bar graph showing vitamin A quantities in specific fruits and vegetables.
Vitamin C, also known as ascorbic acid, helps the body heal cuts and wounds and helps lower the risk of infections. Vitamin C is only found in plant foods. Use the information from the *Fresh Fruits and Vegetables Nutrition Facts* handout to create a bar graph showing the vitamin C quantities in fresh produce.
**Instructions:** Using the graphs or labels provided, answer the questions below. As you complete the worksheet, think of why eating a wide variety of foods benefits your health. In this activity, categorize tomatoes as vegetables, even though they are scientifically fruits.

1. Which fruit contains the highest Percent Daily Value of vitamin A? ______________________
2. Which vegetable contains the highest Percent Daily Value of vitamin A? ______________________
3. Which fruit or vegetable contains the lowest Percent Daily Value of vitamin A? ______________________
4. Which fruit contains the highest Percent Daily Value of vitamin C? ______________________
5. Which vegetable contains the highest Percent Daily Value of vitamin C? ______________________
6. Which fruit or vegetable contains the lowest Percent Daily Value of vitamin C? ______________________

7. List some fruits and vegetables that are higher in fiber than others.
   ______________________________________________________________________
   ______________________________________________________________________
   ______________________________________________________________________

8. Find two fruits and two vegetables that are high in both vitamin A and vitamin C and list them.
   ______________________
   ______________________

9. Which way is easier for you to compare nutritional value of the fruits or vegetables—the labels provided or the graphs you made? ______________________ Why? ______________________

10. From the nutrient information provided, nominate one fruit or vegetable to be the "Best Produce" award winner. What fruit or vegetable did you choose? ______________________

   ______________________
11. Plan meals and snacks for one day so you would eat a total of three or more vegetable servings and two or more fruit servings. Write each food item in the chart below.

<table>
<thead>
<tr>
<th>Breakfast</th>
<th>Lunch</th>
<th>Dinner</th>
<th>Snacks</th>
</tr>
</thead>
</table>

12. Why is it important to build a healthy eating style and build it throughout your lifetime? _______________

For Fun! How many different definitions can you find for the words “fruit” and “vegetable?”
1. Which fruit contains the highest Percent Daily Value of vitamin A? Watermelon

2. Which vegetable contains the highest Percent Daily Value of vitamin A? Carrots

3. Which fruit or vegetable contains the lowest Percent Daily Value of vitamin A? Strawberries (fruit) or potatoes (vegetable)

4. Which fruit contains the highest Percent Daily Value of vitamin C? Oranges

5. Which vegetable contains the highest Percent Daily Value of vitamin C? Sweet red peppers

6. Which fruit or vegetable contains the lowest Percent Daily Value of vitamin C? Apples (fruit) or green beans (vegetable)

7. List some fruits and vegetables that are higher in fiber than others. Broccoli, carrots, corn, sweet red peppers, pears, oranges all have 2 grams of fiber or more per serving

8. Find two fruits and two vegetables that are high in both vitamin A and vitamin C and list them. Watermelon and plums (fruit) and sweet red peppers and broccoli (vegetables)

9. Which way is easier for you to compare the nutritional value of fruits and vegetables—the Nutrition Facts labels provided or the graphs you made? Answers vary

10. From the nutrient information provided, nominate one fruit or vegetable to be the “Best Produce” award winner. What fruit or vegetable did you choose? Answers vary

11. Plan meals and snacks for one day so you would eat a total of three or more vegetable servings and two or more fruit servings. Answers vary

12. Why is it important to build a healthy eating style and build it throughout your lifetime? Answers vary
## Purpose

The purpose of this lesson is for students to perform scientific experiments where they examine fruit and vegetable preparation and storage.

## Background Information

All plants are made up of living cells that are held together by cell walls. When some fruits and vegetables are cut, the cell walls are broken and a chemical reaction occurs which causes the cut surfaces to darken. The chemical reaction is caused by exposure of the fruit or vegetable to oxygen in the air. This chemical reaction is called oxidation and is promoted by enzymes that are released when the cells are cut open. Fruits and vegetables that have been discolored from oxidation are still edible, despite the change in appearance. The chemical reaction that causes darkening will not occur when:

- Ascorbic acid is present naturally in the fresh produce, or added immediately after cutting.
- The produce is heated to destroy the enzymes that cause discoloration due to oxidation.
- The food is covered to prevent oxygen from entering the cut cells.

Bruised and blemished produce is also edible if the imperfections are removed with a knife. However, moldy fruit and vegetables should be discarded because some molds produce toxins that are potentially harmful.

In this lesson, students will experiment with fruits and vegetables to determine the best method to prevent discoloration.

It is important to discuss with students that the agricultural industry establishes guidelines on how fresh produce should be shipped and stored so that quality produce gets to the consumer. It is equally important to discuss with students the appropriate produce storage and handling techniques they should use at home.

## Time

**Teacher Preparation:**
20 minutes

**Student Activities:**
Two 50-minute sessions

## Materials

For each student or partnership:

- Two different fruits (apple, avocado, peach, plum, or pear)
- Two different whole vegetables (potato, eggplant, zucchini, sweet potato, or carrot)
- Paper or plastic plates (12)
- Knife (metal or heavy-duty plastic)
- Plastic wrap
- Treatment chemicals: lemon juice, pineapple juice, ascorbic acid solution, sodium bicarbonate solution, citric acid solution
- *The Chemistry of Fruits and Vegetables* activity sheet (page 40)
The Chemistry of Fruits and Vegetables

Materials (continued)

For the teacher:

- Two bowls of cut produce (such as fruit salad), one treated with lemon juice
- Sharp metal knife
- Storage area for student experiments

Procedure

Day 1

1. At least five hours prior to class, prepare two bowls of fresh fruit salad. Liberally apply lemon juice to one of the bowls.

2. Show the class the two bowls of fruit salad. Ask students to choose which of the fruit servings they would prefer to eat. Have students share why they prefer one bowl over the other.

3. Ask students why they think the salads look different. Collect responses from students and write them on the board. If they suggest that one is older than the other, explain that they were prepared at the same time. Building upon the students' ideas, reveal that the more appealing fruit was treated with a natural chemical found in lemons called ascorbic acid.

4. Divide the class into cooperative groups of 3-4 students. Explain to students that their challenge is to find a way to prevent a variety of fruits and vegetables from turning brown. Outline the safety requirements students should follow when using a knife. Introduce the potential treatment options for the fruits and vegetables. Have them record their hypotheses on The Chemistry of Fruits and Vegetables activity sheet on page 40.

Potential treatment options:

- Lemon juice
- Pineapple juice
- Sodium bicarbonate solution (one teaspoon of baking soda dissolved per 100 mL of water)
- Ascorbic acid solution (one crushed vitamin C pill dissolved per cup of water)
- Citric acid solution (one gram of citric acid dissolved per 1000 mL of water)
- Plastic wrap

For the teacher:

- Two bowls of cut produce (such as fruit salad), one treated with lemon juice
- Sharp metal knife
- Storage area for student experiments
5. Instruct groups to select two types of vegetables and two types of fruit for their experiment. Students will need to slice three equal portions (one control and two different treatments) of each fruit and vegetable.

6. Without delay, treat the three slices of each type of fresh produce as follows:
   - First slice—leave exposed to the air (the control).
   - Second slice—apply treatment of choice to all exposed surfaces.
   - Third slice—apply different treatment of choice to all exposed surfaces.

7. Have students record their observations on *The Chemistry of Fruits and Vegetables* activity sheet (page 40). Observations should be made and recorded immediately after cutting and at regular 10-minute intervals for thirty minutes.

**Day 2**

1. Have students make their final observations.

2. Hold a class discussion on produce discoloration and the effect different treatments have on fresh produce. Take time to discuss the real-life application of their experiment, as well as the types of discoloration that affect the healthfulness of food, such as mold and bruising.

3. Have student groups discuss results as well as draw and write conclusions. Students should be able to make conclusions about the following and then complete their worksheets:
   - How does the naturally occurring ascorbic acid content of different types of produce affect the rate in which they brown?
   - What treatment is most effective in preventing discoloration?
   - As consumers, how will the results of this experiment affect how they store food?
   - As scientists, what additional information would they want to know before marketing their solution to consumers?
Variations

- Have students write a formal lab report, which includes a purpose, hypothesis, materials list, procedure, results, and conclusion.

- Before the activity, have students predict what the results of the experiment will be (hypothesis). After the experiment, have the students compare their data with their predictions.

Extension

- Conduct a blind taste test. Divide students into groups. Have each group select a student to be a taster and blindfold him or her. Give this student a freshly cut piece of fruit, then give him or her a piece of the same kind of fruit that has oxidized (turned slightly brown). Have the taster comment on the differences in taste and texture.

- Bring in ready-cut produce from the grocery store, such as broccoli florets, apple slices, pineapple, sweet potato sticks, cauliflower florets, or baby carrots. Examine why consumers purchase products pre-cut and research how packaging is designed to extend the shelf life.
**The Chemistry of Fruits and Vegetables**

**Introduction:** The appearance of fruits and vegetables is very important to most people. Some imperfections do not affect the taste or healthfulness of the fresh produce. Examples include skin blemishes, browning of cut fruit, and odd shapes or sizes. Other imperfections, such as bruises, may be cut off and not affect the taste, while others, such as molds, make the fruit or vegetable inedible. In this activity, you will experiment with the browning of cut fruits and vegetables.

**Hypothesis:**

<table>
<thead>
<tr>
<th>Produce Name</th>
<th>Treatment of Food</th>
<th>Color Immediately After Cutting</th>
<th>After 10 Minutes</th>
<th>After 20 Minutes</th>
<th>After 30 Minutes</th>
<th>After 24 Hours</th>

</tbody>
</table>

**Think About It!** *(Complete after you have finished the experiment.)*

Suppose you were only going to eat 1/2 of an apple and wanted to store the other 1/2 to eat the next day. What treatment would you use?  Why?  Explain what your experimental results might mean to a chef who wants cut fruits and vegetables to look attractive.  What was it about your treatment that kept the fruits and vegetables from browning? Use research tools to support your reasoning.  How do your results compare to those of another group?
My Life as a Fruit or Vegetable

Purpose

The purpose of this lesson is to provide students with an opportunity to enhance writing skills while simultaneously learning about the production and distribution of California fresh produce.

Time

Teacher Preparation:
20 minutes

Student Activity:
Six 50-minute sessions, plus time at home

Materials

For the class:
- Commodity reports from the lesson California Crops: From the Farm to the Table
- Fresh produce resources—books, websites, and articles
- Writing paper
- Pens or pencils
- Blank paper for illustrations
- Construction paper or tagboard

For the teacher:
- Butcher or chart paper

Background Information

Cross-curricular writing is an integral part of every student’s language arts education. When opportunities for writing in social studies, science, physical education, and math increase, the development of the whole student is expanded. A study of the vast produce industry in California can occur as students write fictional stories about the production and distribution of fresh fruits and vegetables. The writing process will include brainstorming, writing rough drafts, peer editing, illustrating, and publishing final copies of student work.

Procedure

1. Introduction. Read aloud a winning Imagine this... story that highlights the life of a fruit or vegetable. Visit LearnAboutAg.org/imaginethis for examples. Explain to students that the goal of this activity is for each student to write a fictional, creative story about life as a fruit or vegetable. Each story should outline the life of one fruit or vegetable from the farm to the table.

2. Brainstorming. As a class, generate a list of fruits and vegetables. Also, brainstorm a list of questions that students will need to answer as they write their story about the production and development of a specific fresh produce item. Questions that students answer in their stories may include:
   - From where did I originate?
   - What is my biological classification?
   - To what other plants am I related?
   - How am I planted?
   - Where am I grown and why?
   - How am I grown?
   - What do I look like growing on the plant?
   - How am I harvested?
   - How am I transported?
   - What health benefits do I offer?
My Life as a Fruit or Vegetable

California Standards

Grade 4

Common Core English Language Arts
RI.4.9
RF.4.4
W.4.3, 4.4, 4.5, 4.7
L.4.1, 4.2, 4.3

Grade 5

Common Core English Language Arts
RI.5.9
RF.5.4
W.5.3, 5.4, 5.5, 5.7
L.5.1, 5.2, 5.3

Grade 6

Common Core English Language Arts
RI.6.7
W.6.3, 6.4, 6.5, 6.7
L.6.1, 6.2, 6.3

What potential problems could I cause, if any?
How am I stored?
How am I prepared/cooked?

3. Selecting a theme. Ask students to select one fruit or vegetable that will be the main character or theme of their stories. Each student should write about a different fruit or vegetable. Avoid duplicate produce items.

4. Writing a rough draft. Using resources compiled by you and your students, the commodity reports from the lesson California Crops: From the Farm to the Table, and the list of questions brainstormed by the class, have each student write a story about the life of the fruit or vegetable. The story should be written in the first person narrative, with the fruit or vegetable telling the story.

5. Peer editing. Have students edit each other's work. Explain to students that this is an important step in the writing process and should be taken very seriously. (Students could be assessed on the editing as well as the writing part of the lesson.) Assign each student a classmate's rough draft.

Tell students to edit for the following:

- Proper punctuation
- Content
- Spelling
- Proper sequence (from farm to table)
- Accuracy of facts

6. Rewriting a final version. Have students write final versions of their stories. Ideally, the final versions will include illustrations of each phase of the fruit or vegetable’s growth, development, and distribution. Encourage students to illustrate as much as possible. Advise students to include a title page and verso which includes publisher, copyright, etc. Other requirements should be discussed before the final writing phase.

7. Sharing. Have students share their stories with classmates, family, friends, and anyone else who might be interested.
Extensions

- Encourage students to enter their stories in *Imagine this... Story Writing Contest*. Visit [LearnAboutAg.org/imaginethis](http://LearnAboutAg.org/imaginethis) for more information.

- Have students make a stick or bag puppet of their fruit or vegetable and share their story through the puppet.

- Place the published collection of stories on display in the school library or produce section of the local market.

- Have students make a farm-to-table flow chart for their fruit or vegetable.

- Have students create unique hard covers for their books. Perhaps they could be in the shape of the fruit or vegetable, or a product made from the produce item.

- Have students read their stories to primary students.
What is nutrition?

Nutrition is the interaction between food and living organisms. The study of nutrition focuses on what foods and eating habits promote good health and decrease the risk of disease.

What are nutrients?

Nutrients are substances that are required by living things for a healthy life. For humans, more than fifty substances must be taken into the body in sufficient quantity to meet the body’s needs. These nutrients are classified into six groups: carbohydrates, proteins, fats, water, minerals, and vitamins. The United States Recommended Daily Allowance (USRDA) is an average recommendation of the major nutrients that are included in food labeling.

Where do nutrients come from?

The nutrients required by humans come from the food they eat and the liquids they drink. One nutrient, vitamin D, can be provided by the sun. Most people depend on a network of people to provide them with the food they consume—from farmers and ranchers to food distributors, truck drivers, grocers, and restaurateurs.

What are the nutritional dietary guidelines for Americans?

The 2015-2020 Dietary Guidelines provide the information you need to help Americans make healthy food choices. Based on the current body of nutrition science, the Dietary Guidelines is a resource to help improve the health of individuals, families, and communities across the nation. The current edition has 5 Guidelines:

- Guideline 1: Follow a Healthy Eating Pattern Across the Lifespan.
  - The combination of all the foods and beverages a person eats and drinks over time matter.
Guideline 2: Focus on Variety, Nutrient Density, & Amount.

- One important way of achieving a healthy eating pattern is to choose a variety of nutrient dense foods across all food groups. Nutrient-dense foods have the right balance—they pack in plenty of important nutrients and are naturally lean or low in solid fats and have little or no added solid fats, sugars, refined starches, or sodium. Nutrient-dense foods are the foundation of a healthy eating pattern.

Guideline 3: Limit Calories from Added Sugars & Saturated Fats & Reduce Sodium Intake.

- Less than 10% of your daily calories should come from added sugars.
- Less than 10% of your daily calories should come from saturated fats.
- Adults and children ages 14 years and over should limit sodium to less than 2,300 mg per day, and children younger than 14 years should consume even less.

Guideline 4: Shift to Healthier Food & Beverage Choices

Guideline 5: Support Healthy Eating Patterns for All

What is MyPlate?

In 2015 the United States Department of Agriculture (USDA) updated the federal government's food icon, MyPlate, to serve as a reminder to help Americans make healthier food choices. It is designed to follow the 2015-2020 Dietary Guidelines for Americans. MyPlate illustrates the five food groups using something familiar to many of us—a place setting. Fruits, Vegetables, Grains, Protein Foods, and Dairy are the five food groups identified on MyPlate. For more information visit www.chooseMyPlate.gov.
What about MyPyramid?

Many individuals remember the Pyramids - the Food Guide Pyramid and MyPyramid - USDA’s food guidance symbols before MyPlate, but not many people realize just how long USDA’s history of providing science-based dietary guidance to the American public actually is. Starting over a century ago, USDA empowered Americans to make healthy food choices by providing a number of publications, food guidance symbols, and, more recently, a suite of interactive online tools. Explore the history of USDA’s food guidance on the timeline below.
Sources: USDA ChooseMyPlate.gov

How does the food get from the farm to the consumer?

Only 1 to 2 percent of the United States population actually grows the food for all of the people in the United States to consume. Research and technological advances continue to improve agricultural production and assist the farmer in producing plentiful and healthful food. The quantity and variety of fresh produce and other foods available to the United States consumer make it simple and affordable to meet the recommended dietary guidelines.

Generally, the farmers and ranchers produce the food and then use a food delivery system similar to the one described above. In some instances, the food goes to a food processor to make items such as tomato sauce, fruit cocktail, and canned soups before heading to a distribution center. The food is then delivered to grocery stores, wholesale markets, and restaurants, where it is sold to consumers. Additionally, farmers markets and produce stands allow consumers to purchase fresh produce directly from farmers.
center. In other cases, food is sold directly to the consumer. Such is the case at fruit and vegetable stands and farmers markets. Fresh produce generally goes from the farm to a packing plant and then to a wholesale market or distribution center before heading to the grocery store or restaurant.

**What is a packing center?**

After fruits and vegetables are picked from the fields or orchards, they are transported to a packing center. There the produce is cooled, sorted (by size, color, ripeness, or grade), and then packed into appropriate containers such as cartons, lugs, or flats.

**Where does fresh produce go after it is properly packed?**

The fresh produce may be transported to a distribution center or a wholesale market. Distribution centers are refrigerated to preserve the freshness of fresh fruits and vegetables. The food remains in this location until another truck takes it to a store, wholesale market, or exporter.

**How long does it take to get fruits and vegetables from the farm to the table?**

On an average, it takes just a few days for produce to travel from the farm to homes throughout the country. Even cherries and pears grown in California can reach Japan just two days after shipping. However, some fruits and vegetables such as tomatoes, apples, and cucumbers are covered with a water-soluble edible wax before being packed. These items can be stored for more than a month before arriving at a supermarket. This is one way fresh produce can be made available over a longer period of time. The agricultural community continues to develop innovative techniques in fresh produce preservation.
Answers to Commonly Asked Questions

What are some current trends in fresh produce?

Fresh produce is eaten by consumers more often if it is prepared for them. Value-added products, such as ready-to-eat salad kits and stir-fry mixes, baby carrots, and cut fruits are now standard in grocery stores. People are also opting to grow their produce in home, school, and community gardens. In some areas, fresh produce can be ordered from local growers and delivered to doorsteps. The increase in handling and services usually increases the cost of the items.

How can people be assured that the food they eat is safe?

The United States Department of Agriculture and the United States Environmental Protection Agency personnel continually meet with research scientists, technical experts, farmers, ranchers, and the general public to discuss food safety issues and to establish guidelines and standards for all food processors, handlers, and others involved in food production and distribution. Inspections occur on a regular basis to make sure that the food meets the governmental standards and regulations. The United States currently has the safest food supply in the world and many people work hard to maintain this position.

People in the United States, especially in California, are fortunate to have such a wide variety of healthful fresh fruits and vegetables year-round. By practicing safe food handling and storage, consumers also play a significant role in food safety. All fruits and vegetables should be washed before eating or cutting them. Consumers should be careful to avoid cross-contamination of raw meat, poultry, and seafood with fresh produce.

American Farm Bureau Foundation for Agriculture

Apple Ag Mag
Classroom sets of 30 agriculture magazines explore the production of apples. Topics include apple production, history, growth, varieties, and careers.

Corn Ag Mag
Classroom sets of 30 agriculture magazines are provided in a set that explores corn. Topics include corn as an export, a renewable resource, and for use as a fuel and bioplastic.

Soybean Ag Mag
Classroom sets of 30 agriculture magazines are provided in a set that explores soybeans. Topics include nutrition, economics, geography, math, and science.

Soybeans in the Story of Agriculture: Educator’s Guide
This educator’s guide of lessons and activities is designed to use with the book, “Soybeans in the Story of Agriculture” to teach reading, science, and social science. The book and activities show the process of growing soybeans to the making of products.

American Farm Bureau Foundation for Agriculture
600 Maryland Avenue SW, Suite 1000W
Washington, DC 20024
Phone: (800) 443-8456

Website: www.myamericanfarm.org

Illinois Agriculture in the Classroom

Exploring Corn!
This booklet offers cross-curricular activities for students to explore dent corn, sweet corn, and popcorn. Information is also included about broom corn, a type of sorghum, which is in the same family as corn.

Nutrition Ag Mag
Classroom sets of 30 agriculture magazines feature information about nutrition, classroom activities, and agricultural careers.

Super Soybeans Lesson Booklet
The soybean has many important roles in our lives, from the food we eat to the products we use to clean. This lesson booklet explores the many uses of soybeans and can be used to teach skills in science, social studies, and math. Lessons complement the book, “The Super Soybean,” by Raymond Bial.

National Agricultural Literacy Curriculum Matrix
Find lesson plans, books, and other resources to teach about nutrition, fruits, vegetables, and much more. Check out “The Farmer Grows a Rainbow” for lessons that integrate nutrition with traditional academic subjects, and emphasize the vital role played by the farmer in food production.

North Carolina Sweet Potato Commission, Inc.
Carolina Sweet Potato Investigation (CSPI)
Presented in the form of a lab journal with guiding questions for each month of the school year, this lesson set contains links to virtual field trips and interviews. Students can view a greenhouse and packing house where sweet potatoes are graded and shipped to retailers. They can visit a research facility where the all-important task of micro-propagation is fine-tuned in order to produce a delicious, nutritious, and economical product.

Sweet Potato Activity and Lesson Plans
These lessons, geared for upper elementary classrooms, teach about North Carolina sweet potatoes while students perform science, technology, math, and language arts activities.

California Raisin Marketing Board
California Raisins
For the history, nutrition, recipes, and more about raisins.

United States Potato Board
Kid’s Corner
Fun coloring books, games, activities, and resources to learn more about potatoes.

Overbeck, Cynthia. *How Seeds Travel*. Lerner Publications Company, 1993. This book presents a look at seeds on the move. Colorful photographs trace the journeys made by seeds from such varied plants as the maple tree, the dandelion, pussy willow, and coconut palm. The role of seeds and fruit in plant reproduction is also explained. ISBN 978-0-8225-9569-4

Agriculture: The science and business of growing crops and raising livestock.

Ascorbic acid: Another name for vitamin C; necessary in the body for healthy cells.

Citric acid: An organic acid which acts as a natural preservative. It is also used to add an acidic, or sour, taste to foods and beverages.

Climate: The weather conditions of a region, such as temperature, air pressure, humidity, precipitation, sunshine, cloudiness, and winds.

Commodity: Fruits, vegetables, nuts, or grains, as a unit that are bought or sold.

Conservation: The careful use of resources such as water.

Consumer: A person or thing that eats or uses something.

Crop: An agricultural plant grown and harvested.

Cup equivalent: The amount of a food product that is considered equal to 1 cup from the vegetable, fruit, or milk food group. A cup equivalent for some foods may be less than a measured cup because the food has been concentrated (such as raisins or tomato paste), or more than a cup for some foods that are airy in their raw form and do not compress well into a cup (such as salad greens).

Discoloration: A change in color.

Distribution center: A place where food or other items are stored until they are transported to a store, wholesale market, or elsewhere.

Farm: A piece of land where crops or animals are raised.

Farmer: A person who produces food, fiber, or plants, for others to use.

<thead>
<tr>
<th><strong>Glossary</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Fiber:</strong> An indigestible carbohydrate found in plant foods that is important to the health of the digestive tract.</td>
</tr>
<tr>
<td><strong>Flatbed:</strong> A truck or trailer without sides.</td>
</tr>
<tr>
<td><strong>Fruit:</strong> Scientifically speaking, the matured ovary of a flower and its contents; some fruits such as squash are called vegetables because they are vegetation that is prepared for the table.</td>
</tr>
<tr>
<td><strong>Geography:</strong> The mountains, valleys, lakes, rivers, and other physical elements that make up an area.</td>
</tr>
<tr>
<td><strong>Grain:</strong> A small hard seed of a cereal plant such as wheat or rice.</td>
</tr>
<tr>
<td><strong>Harvest:</strong> The gathering of a crop.</td>
</tr>
<tr>
<td><strong>Map:</strong> A picture that represents all or part of the Earth’s surface.</td>
</tr>
<tr>
<td><strong>MyPlate:</strong> Developed by the United States Department of Agriculture, a visual cue that reminds consumers how to make healthy food choices. MyPlate replaced MyPyramid in 2011.</td>
</tr>
<tr>
<td><strong>Nutrient:</strong> A chemical component of food that is essential, in some quantity, to a living organism.</td>
</tr>
<tr>
<td><strong>Nutrition:</strong> The interaction between food and a living organism.</td>
</tr>
<tr>
<td><strong>Ounce equivalent:</strong> The amount of a food product that is considered equal to 1 ounce from the grain group or the protein foods group. An ounce equivalent for some foods may be less than a measured ounce if the food is concentrated or low in water content (nuts, peanut butter, dried meats, or flour), or more than an ounce if the food contains a large amount of water (tofu, cooked beans, cooked rice, or cooked pasta).</td>
</tr>
<tr>
<td><strong>Oxidation:</strong> The interaction between oxygen molecules and all the different substances they may contact, from metal to living tissue.</td>
</tr>
</tbody>
</table>
Percent Daily Value: The recommended amount of a nutrient to eat each day to stay healthy. The values on the label are based on a 2,000-calorie diet.

Produce: Fresh fruits and vegetables.

Scientific method: The techniques scientists use for investigating phenomena and acquiring new knowledge.

Sodium bicarbonate: An antacid used to relieve heartburn and acid indigestion. The common form is baking soda.

Vegetable: The edible part of a plant which is generally served as part of a main meal; also known as vegetation that is prepared for the table.

Vitamins: A group of essential nutrients used in small quantities to regulate body processes.
